API Call 🚗

Trigger this Magic Loop by calling its API:

urlcurltypescriptpython

```
import requests

url =
'https://magicloops.dev/api/loop/f07aa2b8-
e360-46e4-aedd-8bc5c7746a25/run'
payload = { "text": "Hola mundo",
"targetLanguage": "en" }

response = requests.get(url, json=payload)
responseJson = response.json()
print(responseJson)
```

If this Loop is called when deactivated, it will not run, but the payload will be displayed below for testing.

▼ Output : {

text :  
"no siempre los encuentro, pero siempre es  
bueno intentar"

targetLanguage : "en"

}

Output Variable: \$API\_TRIGGER\_BLOCK\_OUTPUT

Characters: 89 / 50,000

Credits used: 0

↓

LLM ✨

Traduce el texto proporcionado en \$API\_TRIGGER\_BLOCK\_OUTPUT. Extrae el texto del campo 'text' y el código del idioma del campo 'targetLanguage'. Realiza la traducción de manera precisa y devuelve

Show Details >

I don't always find them, but it's always good to try.

Output Variable: \$LLM\_BLOCK\_OUTPUT

Characters: 54 / 50,000

Duration: < 1 second
